Open Access (OA) literature is digital, online, free of charge, and free of most copyright and licensing restrictions. What makes it possible is the internet and the consent of the author or copyright-holder.

OA publishing shifts the costs of content creation and distribution away from subscribers. What this means is that OA published information is freely available to anyone worldwide with an internet connection – no subscription necessary. Instead of relying on subscriptions to subsidize publishing costs, those costs are covered by sponsorships or author-side fees, which may be covered by institutions or grant-funding organizations.*

Open Access Scholarship

Are you interested in publishing open access? The Furman University Libraries’ Open Access Fund can provide financial support for members of the Furman community seeking to publish open access. The Fund pays article processing charges (APCs) required by many open access publications. Read the guidelines and apply for funding here: http://libguides.furman.edu/oa-fund
