

## **Modeling the Banana-climate indices in Taiwan**

Ya-Wen Chiueh,

National Hsinchu University of Education, Taiwan

### **Abstract**

The study compared the climate indices and analyzed the key components in different countries and products, and considered the major agricultural climate features, including precipitation, temperature, solar duration, radiation, and uncertainty features such as the ENSO and rainfall extremes, to compose the climate indices for banana production in Taiwan. The study used the regression model for panel data random effects, estimated banana -climatic indices in Taiwan, and based on the results to provide specific policy recommendations.
