Sabbatical Showcase

John Barrington

Professor, History

The History of the Welsh Neck Baptist Church, 1738-1798. Spring Semester 2017.

My project explores the history of an influential South Carolina Baptist community, one with close ties to Richard Furman. Among the topics examined is the impact of the Revolution on Baptist attitudes towards slavery: the Welsh Neck Church became a mixed-race church during the course of the war and remained so afterwards. My research was conducted with the assistance of Furman History Major Jasmine Hwang (2014) and the manuscript has been accepted for publication by Mercer University Press.

Christopher Blackwell

Professor, Classics

Architecture for Textual Analysis of Formulaic Language in the Homeric Iliad. September, 2016 – August, 2017.

This year continued a long-term study of the language of Greek Epic poetry. This study requires software tools, and well-understood data models. This year I refined those data models and wrote software libraries for working with textual data and other kinds of data. These serve my project, but are totally generic. I will demonstrate one web-based, generic software tool for browsing and analyzing multilingual texts that emerged from this year's work.

Liz Bouzarth

Associate Professor, Mathematics

Exploring Data Analytics and Visualization in Sports and other Applications. Fall 2017.

I spent my sabbatical time exploring data analytics and visualization while extending ideas in social network analysis to sports analytics. I attended conferences in sports analytics and data visualization, collaborated with Furman colleagues, students, and outside collaborators, and worked on writing our multi-phase project for an academic audience (rather than a sports entertainment audience). I also submitted a paper on a different project in computational fluid dynamics inspired by biology.

Sarah Frick

Associate Professor, Mathematics

Odometers, Generalized Substitutions, and Bratteli-Vershik systems. Spring 2017.

A dynamical system can be thought of a space that is evolving. For an odometer the space is infinite sequences and the evolution is defined by addition. For a substitution the space is also infinite sequences, but the evolution is defined by shifting the sequence. For a B-V system, the space is infinite paths on a graph and evolution is moving between paths. We show how in a particular sense these three seemingly different systems are all different presentations of the same dynamical system.

Margaret Oakes

Professor, English

"Can You Hear Me Now?": Preaching to the Masses in Early Modern London. Fall 2017.

My sabbatical initiated as a study of the variations in the construction of John Donne's sermons between preaching in an indoor venue such as Lincoln's Inn and outside to a crowd of up to 3,000 at St. Paul's Cross, just outside the cathedral. However, it morphed into a study of the peculiarities of an individual sermon which Donne was forced to preach, apparently on very short notice, to promote an unpopular policy of King James.

Jason Rawlings

Associate Professor, Biology

Inhibition of PI3K by Hibiscone C. Spring 2017.

*I published two papers as corresponding author: a book chapter in *Advances in Protein Chemistry and Structural Biology* and a manuscript featuring 3 Furman student coauthors in collaboration with Brian Goess (Chemistry) in *Bioorganic and Medicinal Chemistry Letters*. I wrote a competitive renewal for a National Institutes of Health INBRE DRP grant that extended funding for a total of \$228,801 over 3 years, the first time this type of grant has been successfully renewed in South Carolina. Finally, I submitted a National Institutes of Health R15 AREA grant that if funded, will provide nearly \$400,000 in total costs over 3 years.*

Open Access (OA) literature is digital, online, free of charge, and free of most copyright and licensing restrictions. What makes it possible is the internet and the consent of the author or copyright-holder.

OA publishing shifts the costs of content creation and distribution away from subscribers. What this means is that OA published information is freely available to anyone worldwide with an internet connection – no subscription necessary. Instead of relying on subscriptions to subsidize publishing costs, those costs are covered by sponsorships or author-side fees, which may be covered by institutions or grant-funding organizations.*

Open Access Scholarship

Are you interested in publishing open access? The Furman University Libraries' Open Access Fund can provide financial support for members of the Furman community seeking to publish open access. The Fund pays article processing charges (APCs) required by many open access publications. Read the guidelines and apply for funding here: <https://libguides.furman.edu/oa-fund>
