

Reapers and Mowers is to take place, and trust that the Farmers of Illinois will afford every facility to the State Agricultural Society, in order to have a full and efficient exhibition and test of this class of machines.

South Carolina

The Louisville Journal in an article upon the attack of Brooks upon Sumner, concludes with the following paragraph, every word of which is true. The only men in South Carolina who gave their efforts to the country in the Revolutionary war, were poor men, and poor men in South Carolina at this time are denied the right of suffrage, and are incapable of holding office. The Louisville Journal says:

"There were twice as many traitors in South Carolina in the days of the Revolution, as in any other State in proportion to population, and we think that her soil as a general rule, grows worse men now than it did then.

"The shameful imbecility of South Carolina from slavery during the Revolution and its more shameful assumptions for slavery since, to say nothing of its hordes of Tories during the Revolution and ever since, is so clearly seen in the history of our country, that it is surprising anybody out of South Carolina should pronounce it libellous, or be so shameless as to attack Sumner (by way of making a sneaking justification of Brooks) for flinging the hard fact in the teeth of the blustering bullies who truly represent in Congress that pestilent State, which, with absurd insolence and vanity, claims to be the State — par excellence, the commonwealth of the continent.

"The honors ascribed to South Carolinians for bravery in the Revolution, by Webster, and the common consent of mankind, belong not to the slaveholders, but to the 'poor white trash,' so despised then and now, by the lordly neighbors. The oligarchy of South Carolina was as tremulous then at the idea of war with England, and had the palsy of conservatism, as now.

From the New York Post.

The New Magnetic Electrical Light.

The "Galvanic Light Company," recently organized in England, claims that the magneto-electrical light produced by machinery, of which they are the inventors and patentees, is the most perfect illuminating agent hitherto known. — They have sent out one of their machines to this country, and it is now being put up for a trial in
