Wounded Warrior Project receives university support

ON JULY 11, 2007, while on combat patrol in Baghdad, Capt. Wayne Waldon '04 was wounded when an IED improvised explosive device attack the Humvee in which he was riding. Waldon, an Army Ranger and platoon leader with the 3rd infantry, suffered a severe injury to his right leg, to the point that it had to be amputated just above the knee. He would go on to receive the Bronze Star and the Purple Heart.

Because of his determination, positive attitude and hard work during and following his recovery, Waldon is credited with being an inspiration to others undergoing rehabilitation for similar injuries at Walter Reed Hospital. He has also testified before Congress about meeting the needs of injured veterans.

Now retired from the military and associated with defense contractor General Dynamics in Virginia, Waldon is a strong supporter of the Wounded Warrior Project. The nonprofit, founded in Roanoke, Va., is dedicated to helping those who have been wounded in the line of duty.

Schutz beats law of averages, lands job in NFL

FOR THE BETTER PART of her four years at Furman, Kelly Schutz prepared for her job on the National Football League by studying mathematical concepts like the cosine rule, which can be used to find the third side of a triangle when any two sides and the angle between them are known.

While Schutz, who graduated in 2010 with a degree in mathematics, has yet to use the law of cosine in her job as a public relations assistant for the Tampa Bay Buccaneers, she is a good example of how a liberal arts education can push students along an entirely unexpected career path and prepare them for something they hadn't quite imagined.

“When I came to Furman, I knew I wanted to major in math and become a teacher,” Schutz says, “so that’s the path I took.”

And that was the plan right up until the beginning looking for internship opportunities in the summer before her senior year. But when a math major to do? Well, it might sound unconventional, but if you were born and had lived until age 6 near Green Bay, Wis., and your family members were huge Packers fans who returned to Lambeau Field at least once every year, why not take a shot at interning for a National Football League team?

Even though she knew she would be very against public relations and sports management majors for an internship, Schutz sent resumes to 30 of the NFL teams. To gain experience, she got a job working in the press box with Furman's sports information office during the Paladins' 2009 football season.

“We had Kelly for only one season, but I knew right away she had more than a passing interest in learning about what happens in the press box,” says Hunter Read, assistant athletics director for sports information at Furman. “She was extremely bright and articulate, and she was one of the best assistant student assistants we’ve ever had.”

Schutz actually was called to New York for an interview with the Jets and was “heartbroken” when it didn’t work out. But not long after, she heard from the Tampa Bay Buccaneers. They interviewed her over the phone, then invited her to come for a second interview in Charlotte, N.C., where the Bucs were playing the Carolina Panthers. Shortly thereafter, the Bucs offered her the internship.

“I didn’t get too many resumes from math majors, but that didn’t bother me at all,” says Jeffrey Kimm, former director of public relations for the Bucs who now serves as executive vice president of business development for the FC Tampa Bay Rowdies soccer team. “I liked that Kelly had experience in the SID office at Furman, and I was impressed that she was willing to drive to Charlotte for an interview. That told me she was serious about the internship.”

“[After the internship] ended, Schutz applied for the club’s open position, then upacked and headed back to Furman. Two days before graduation on May 8, she learned she had the job.

“When I began applying for internships, I never thought it could possibly lead to a career,” says Schutz. “But I loved working in the press box at Furman and in the Buccaneers’ public relations office, and it didn’t take long to know it was something I wanted to pursue seriously.”

So it’s public relations in the NFL for now, although Schutz won’t rule out working with the law of cosine again someday: “I might go back and touch math at some point,” she says. “I know it’s something I would love to do. And it’s comforting to know that possibility still exists for me.”
